

dear mark,

12/6/76

thanks for your thoughtfulness in sending the article.

by the way, that nixon-rubenstein memo is a fake. i understand the form on which it is typed did not exist in those years.

pretty good story. should get you more appearances.

you ask about the phlebitis just when an arm tendon reduces me to the other hand only!

i feel fine, most of the time, anyway. in 5 months i will be 64. today i began at 4 a.m. i travel when i have to and as far as necessary but i drive my own car only short distances, can't let the legs hang down. the circulatory damage was permanent and extensive before it was discovered.

the adjustments include eliminating all the unnecessary to give more time for the necessary.

that i work a long day every day is, i think, the best answer.

thanks for asking.

good luck with your endeavors.

hope you get a good job soon.

sincerely,
